

# WHAT MAKES COOPER KING DRY GIN UNIQUE?

## BOTANICALS, TREE PLANTING AND INNOVATION

Honey from our family beehives, beautiful lemongrass and a touch of locally grown lavender brings to the gin incredible savoury lemongrass flavours, a silky mouthfeel and delicate floral notes.

1 square metre of native English woodland is planted through our Yorkshire Dales Millennium Trust partnership for every bottle of Dry Gin sold, making it the first gin in Europe to join the 1% for the Planet® initiative.

Uniting state-of-the-art vacuum distillation with a traditional copper pot still in a process that's tailored to suit each individual botanical, creates a gin with the freshest, fullest flavours unlike any other.

## EXCEPTIONAL SPIRIT

### HAND DISTILLED WITH WHEAT AND MALT SPIRIT

Cooper King Dry Gin is hand distilled, bottled and labelled here at Cooper King Distillery in Yorkshire.

To create a gin of exceptional character we're taking an unprecedented approach to distillation, by marrying botanicals with a combination of rich malt spirit and smooth wheat spirit.

Cooper King Dry Gin is an excellent sipping gin which we recommend you first try neat or with an ice cube, before moving on to explore with mixers. Be sure to read the Tasting Guide included with every bottle purchase, which will guide you through the suggested serves.
